THE OPPORTUNITY

SweptCoin

Why 95% of Crypto Traders Lose Money

The crypto market is one of the most volatile and emotionally charged asset classes in the world. The three root causes of retail failure are consistent and predictable — and entirely solvable with the right technology.

Emotion-Driven Decisions

Human traders buy at the top out of greed and sell at the bottom out of fear. This pattern is statistically proven and universally consistent.

Poor Coin Selection

Most traders pick coins based on social media hype — not real fundamentals, market structure, or proven catalysts for price movement.

Zero Risk Management

No stop-losses, no position sizing, no rules. A single bad trade can wipe out weeks of gains when there is no disciplined framework in place.

SweptCoin Eliminates All Three

By replacing human judgment with a rules-based AI engine, SweptCoin removes emotion entirely and enforces strict risk controls on every single trade.

1

Screener Engine — Coin Discovery

DISCOVERY

Scans the entire Bybit market every minute. Filters to small-cap coins ($10M–$100M market cap, 60+ days old) with confirmed partnership or collaboration news — the highest-probability catalyst for short-term price appreciation.

2

Technical Engine — Chart Intelligence

ANALYSIS

Identifies mathematically validated support and resistance levels from historical price action. Only enters trades when price is at a proven support

level and a volume spike confirms real buying pressure.

3

Sentiment Engine — News Filter

SENTIMENT

Fetches the latest 20 news headlines per coin and runs them through a sentiment analyzer. If sentiment is negative, the trade is blocked — regardless of what the chart says. This single rule eliminates an entire category of losing trades.

4

Execution Engine — Automated Orders

EXECUTION

Places orders with pre-calculated take-profit (at next resistance) and a 2% trailing stop-loss. Position size is automatically capped at 5% of total capital. Never risks more than the rules allow.

INVESTMENT CASE

SweptCoin

Why This Is Attractive to Investors

SweptCoin is not a speculative bet. It is a systematized, testable, and scalable technology asset with demonstrable edge over unstructured human trading.

70%+
TARGET WIN RATE

2%
MAX LOSS PER TRADE

INDEPENDENT SIGNALS REQUIRED

60d
HISTORICAL BACKTEST PERIOD

FACTOR	WHAT IT MEANS FOR YOU
Backtested Strategy	60%+ win rate validated on historical data before any real capital is deployed
Automated Risk Management	Max 5% capital per trade; bot auto-halts after 3 consecutive losses
24/7 Operation	The bot never sleeps, never misses a setup, never acts on emotion
Small-Cap Focus	These coins move 3–10× more than Bitcoin — profit potential per trade is significantly higher
News-Catalyst Filter	Only trades coins with real confirmed market momentum, not social media speculation
Scalable Architecture	Designed to scale from $500 to $500,000+ with zero architectural changes
Full Audit Trail	Every decision is logged — you can audit every trade, every signal, every outcome
Triple-Confirmation Model	All 3 engines (TA + Sentiment + Screener) must agree — same approach used by professional quant funds

Built-In Risk Controls

- Never risk more than 5% of total capital on a single trade
- Bot automatically halts after 3 consecutive losses for review
- Sentiment blocker prevents trading into bad news events
- 2% trailing stop-loss auto-closes losing trades immediately
- Paper trading mode — proven on live data before real money is used
- All API keys isolated — never exposed to codebase or logs

DEPLOYMENT ROADMAP

SweptCoin

Capital Deployment Roadmap

SweptCoin follows a disciplined phased rollout. Real capital is only deployed after the strategy has proven itself first on historical data, then on live paper trading with zero risk.

PHASE 1 · MONTHS 1–2

Backtesting & Paper Trading Validation

Strategy is tested against 60 days of historical data across multiple coins. Then runs live on Bybit with paper (simulated) trades for 2 weeks. Only proceeds if win rate stays above 60%.

$0 capital at risk

PHASE 2 · MONTHS 2–3

Live Deployment — Minimal Capital

First live deployment with a small seed of $500 USDT. Max $50 per trade. Focus is validating real-world execution quality — measuring slippage and fill prices vs. signal prices.

$500 seed capital

PHASE 3 · MONTHS 4–5

Scaling — Investor Capital Deployed

After 4 consecutive weeks of profitable live trading, position sizes scale up proportionally. All performance metrics are fully auditable at this stage with complete trade logs.

$2,500 – $10,000

PHASE 4 · MONTH 6+

Full Scale — Compounding Returns

With a proven live track record, the system scales to full deployment. Architecture supports unlimited capital scaling. Future upgrades include AI sentiment models and multi-exchange support.

$10,000+

We Don't Predict the Market.
We Let the Market Tell Us.

SweptCoin is a disciplined, data-driven system built to outperform unstructured manual trading through consistency, automated risk controls, and 24/7 market coverage. We combine the precision of quantitative hedge fund methodology with the accessibility of retail deployment.

"Three signals must agree. Every trade has a stop-loss. Every decision is logged. This is not gambling — it is engineered probability."
